PROFESSIONAL SUMMARY

MERN Stack Developer with professional experience since February 2026 in developing and maintaining responsive web applications using JavaScript, React.js, Node.js, Express.js, MongoDB, HTML5, and CSS3. Experienced in frontend development, REST API integration, backend connectivity, database operations, responsive UI development, debugging, testing, Git-based version control, and application maintenance. Currently contributing to the development and maintenance of a travel agency website for Presto.

TECHNICAL SKILLS

Frontend: JavaScript, React.js, HTML5, CSS3, Responsive Web Design, Frontend Development, UI Development

Backend: Node.js, Express.js, REST APIs, API Integration, Backend Development

Database: MongoDB, Database Management, CRUD Operations

Tools & Version Control: Git, GitHub, npm, Visual Studio Code

Development Practices: Debugging, Testing, Issue Resolution, Application Maintenance, Deployment Support

Additional: IoT, Embedded Systems, Arduino, ESP32, Raspberry Pi

Protocols: I2C, SPI, UART

PROFESSIONAL EXPERIENCE

MERN Stack Developer February 2026 – Present

Cyberathon Technology, Nagpur

- Develop and maintain web application features using React.js, JavaScript, HTML5, CSS3, Node.js, Express.js, and MongoDB.
- Build responsive and reusable user interfaces with React.js, focusing on component-based development, usability, cross-device compatibility, and consistent UI implementation.
- Work with REST APIs for frontend-backend communication, API integration, data handling, and application functionality.
- Work with MongoDB for application data management and support backend operations using Node.js and Express.js.
- Contribute to application development, feature implementation, code updates, testing, debugging, issue resolution, and maintenance throughout the development workflow.
- Use Git and GitHub for version control and collaborate on code changes while following an iterative development process.
- Currently contributing to the development and maintenance of the Presto travel agency company website as part of the MERN stack development workflow.
- Previously contributed to web applications including NLF Factory and WorkFit, supporting frontend development, functionality, testing, and maintenance.

IoT System Development Intern March 2022 – April 2022

Dalvik Apps, Nagpur

- Worked on IoT monitoring and Internet-based device control, including sensor data collection and device communication.
- Collected and processed real-time data and programmed Arduino and ESP32 microcontrollers for device control.
- Designed, tested, debugged, and prototyped sensor-based systems using I2C, SPI, and UART protocols.

MERN / WEB DEVELOPMENT PROJECTS

Presto Travel Agency Website — Professional Project

- Currently contributing to the development and maintenance of a travel agency company website as part of the MERN stack development workflow.
- Work on responsive web interfaces and application functionality using React.js, JavaScript, HTML5, and CSS3.
- Contribute to frontend-backend integration, testing, debugging, issue resolution, and iterative feature updates.

NLF Factory Website

- Developed and maintained responsive web interfaces using React.js, JavaScript, HTML5, and CSS3, focusing on reusable UI implementation and consistent layouts.
- Contributed to frontend functionality, application maintenance, testing, debugging, issue resolution, and integration within the MERN development workflow.

WorkFit Website

- Built and maintained responsive web pages using React.js, JavaScript, HTML5, and CSS3, with focus on clean layouts and cross-device usability.
- Implemented frontend features and contributed to application functionality, testing, debugging, maintenance, and iterative improvements.

AI-Based Rover with Robotic Arm Using Raspberry Pi

- Developed an AI-enabled rover concept using Raspberry Pi and a robotic arm, combining robotics hardware and software logic for autonomous operation.
- Worked on hardware-software integration, device control, testing, and debugging to support robotic task execution.

PIR Sensor-Based Alarm System

- Designed a motion-detection security system using a PIR sensor to detect human movement and trigger an audible alarm.
- Implemented sensor interfacing and basic control logic while testing the system for reliable motion detection.

EDUCATION

B.Tech – Electronics & Telecommunication Engineering 2024

Priyadarshini College of Engineering, Nagpur | CGPA: 7.02/10

Diploma – Computer Technology 2021
